

TSHT5.8-01 Transformer

RoHS

FEATURES

- Compact SMD package
- I/O isolation test voltage 3k VDC
- Operating ambient temperature range -40°C to +125°C
- Meets EN62368 standards

TSHT5.8-01 Transformer is specially designed for applications where an isolated voltage is required in a distributed power supply system, compatible with integrated IC used as an 1W DCDC converter with 5V input, 5V output. They are suitable for: pure digital circuits, low frequency analog circuits, relay-driven circuits and data switching circuits.

Notes: ①Test conditions: 100kHz/0.1V;

②The temperature of the transformer(ambient plus temperature rise) should be within the operating temperature range;

③The storage temperature of the transformer only;

④We suggest that times of reflow soldering should not exceed twice, For actual application, please refer to IPC/JEDEC J-STD-020D.1.

Table 1: Recommended parameters

IC	MORNSUN SCM1201
C1	1μF/16V
C2	1μF/16V
D1	30V/400mA
D2	30V/400mA

Notes:

1. If it is required to further reduce input and output ripple, the capacitance of C1 and C2 can be increased properly if required, and should be connected close to the pin terminal of the module.
2. In order to ensure the converter can work reliably with high efficiency, the minimum load should not less than 1% rated load when it is used. If the needed power is indeed small, please parallel a resistor on the output side (The sum of the efficient power and resistor consumption power is not less than 1%).
